

FLY FESTIVAL CASE STUDY

FLY Open Air is an open air dance music festival, this year held in Edinburgh under the impressive silhouette of Edinburgh Castle. Back after 2 years away due to COVID, the FLY team knew how anticipated this event was by music fans, and that it needed to go without a hitch.

Objectives

The FLY team wanted rock solid internet connectivity to ensure the uninterrupted running of the tills at all 11 bars at the site. They also wanted internet connectivity for operational purposes throughout the event

The project

Corona IT Solutions went with a bonded WAN solution for this project, bonding mobile data and an on-site ADSL connection in order to provide continuous, quality connectivity. Internet was distributed around the site using wireless access points connected through a combination of hardwired connections and wireless point to point links.

Corona IT Solutions also provided individual 4G routers for outlying areas to ensure connectivity across the whole site.

Corona IT solutions were a phenomenal contractor. Most importantly our IT service was seamless. We experienced no issues whatsoever, especially in a challenging location. Arthur himself was extremely helpful throughout the whole weekend, I even saw him hopping on forklifts and supporting our build crew at one point. I cannot recommend working with him enough!

TOM KETLEY
Founder, FLY

Why Corona IT Solutions

Every solution we design is bespoke for the event. No event is the same so we work closely with events coordinators to ensure our solution will provide exactly what is needed. Whether your event is for 10 or 10,000 people, inside or outdoors, in the middle of a city, on the water or in a field, we have you covered.
