

STANLEY WRIGHT CASE STUDY

Stanley Wright is a Rural Property Consultancy and Chartered Surveyors providing comprehensive advice to property owners, across a range of services, managing the day to day and unlocking opportunity for landowners.

Objectives

We approached Corona IT Solutions to oversee an audit and upgrade of our IT equipment and systems, including installation of new equipment for video conferencing.

The project

Conferencing facility

Corona IT researched several conferencing solutions based on our requirements. We chose an Edis All in One 4k Tracking Video and Sound Bar. They then tested and installed it for us in our chosen location.

Security

Ensuring the security of our business is critical, particularly as we have adapted to new ways of working, including working remotely. Corona IT set us up with new software to ensure that our systems and data are safe.

Ongoing support

It made perfect sense for us to sign up to Corona IT's Managed Services, we are a busy organisation and having Corona IT working in the background proactively monitoring our systems, and there in case we need them, means we can focus on our clients and their needs. We are currently discussing some additional projects with Corona IT Solutions to continue the upgrade and efficient running of our software.

Why Corona IT Solutions?

Corona IT Solutions had previously set up and configured the Wi-Fi in our offices. We were really happy with the level of service and work they had done so knew they would be the right choice for our additional IT needs.

"Their knowledgeable staff gave us several options to look at. The final solution we implemented gave us great value for money and the Corona IT Solutions team was extremely supportive throughout the design and implementation process."
