

FINGLAND FARM CASE STUDY

In the north of Dumfries and Galloway lies Fingland Farm which sits nestled in open moorland with spectacular views. Like a lot of rural Scotland, the area suffers from poor to unusable or non-existent internet.

Objectives

To provide viable broadband at a residential site with no usable internet connection.

To improve security with remote access CCTV.

The project

Broadband

Corona IT Solutions installed a 4G mobile broadband solution at the main property comprising of a point to multi point antenna. This then transmitted to a shed and two additional properties. The broadband was improved from from less than half a megabyte per second (mbps) to an average download speed of 50 mbps and upload speed of 30 mbps.

CCTV

A 2 camera CCTV system was installed at the site. The cameras could be accessed via a mobile app with smart notifications, able to differentiate between vehicles, people and general movement i.e. trees in wind. This gave great piece of mind to the owners in respect to the security of this rural site.
